

VALDEZ

WINTER OILSEED RAPE

“ Compact autumn development remaining relatively prostrate which makes it suitable for the early sowing slot. Good disease package and stem health (RLMS) including verticillium resistance which is important for early sowing. Stiff, shorter with a compact canopy - also has a high oil content. ”

Craig Padley, NPZ UK Oilseed Rape Breeder

KEY CHARACTERISTICS

Data Source: AHDB Recommended List for 2026/7 reproduced with full acknowledgement to AHDB.

- ◆ High seed yield with high gross output
- ◆ Exceptional RLMS & RLm7 stem canker resistance
- ◆ Outstanding Light leaf spot resistance
- ◆ TuYV resistant

OUTPUT

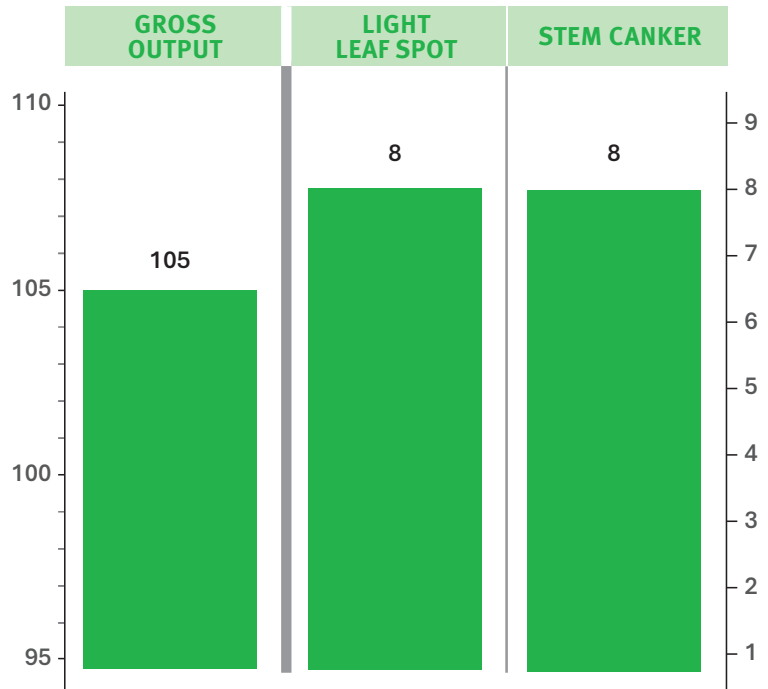

Gross output (yield adjusted for oil content)	105
Oil content	47.6

AGRONOMICS

Resistance to lodging	8
Stem stiffness	8
Earliness of flowering	5
Earliness of maturity	5

DISEASE

Light leaf spot	8
Stem canker	8

Valdez

Ratings above are 1-9. A high rating indicates that the variety shows the character to a high degree.
